

Air And Finned Air Heaters

HEATCO Air Heaters are fabricated from chrome nickel steel tubes and are specially suited for exposed and semi-exposed areas.

Applications : baking and curing of paints, lacquers, varnishes, chemicals and adhesives; also for drying metals, powders, sand, paper, textiles and other similar materials.

Finned Air Heaters are also made from chrome nickel steel tubing. The fins help in rapid and uniform heat transfer for forced air heating. Fitted with fins, the overall width will be 75 mm.

Applications : forced air heating as in ovens, air ducts, industrial processes and load resistors wherever heated air is required.

Type	Wattage	Voltage	U-tube length and outside diameter (mm)	Width tube centre to centre (mm)	Overall dimensions (mm)
HC/AH/10	500	230	248x8.5	35	365x55
